DECORATIVE GLASS & METAL MESH / OCTOBER 2026

# Materials for the complete assembly.

A visual selection catalogue for custom architectural metalwork.
Glass appearance, mesh pattern and the surrounding metal frame.

Silver Vertical Lines Glass

Low-iron Clear Fluted Glass

Fine Diagonal Weave

231 photographed sample references. Four material groups.
Select the appearance, then confirm the construction and specification for your project.

Supplied sample photographs are SELECTION REFERENCES. Interior photographs are DESIGN REFERENCES. These labels do not identify completed FABRITERA projects.

SELECTION / SPECIFICATION / ASSEMBLY

# How to use this catalogue.

Use the FABRITERA reference code to keep a visual choice connected to your project brief. Codes identify pictured samples, not fixed production SKUs. Similar or repeated supplier examples are retained individually where their identity is not confirmed.

**1. Select an appearance.**
Compare a complete sample, including pattern direction, colour and surface character. Photographs are affected by lighting and background.

**2. Define the assembly.**
Send drawings, CAD, a rendering or reference images, approximate dimensions, quantity and intended use. Indicate the visible faces, frame and fixing interfaces.

**3. Confirm the specification.**
Confirm the actual material, thickness or glass build-up, processing, finish and mounting for the project. Do not scale dimensions from the photographs.

**4. Review fabrication details.**
FABRITERA develops manufacturing details around the proposed metalwork assembly. Overseas installation is normally undertaken by the customer's local team.

**Reading the images.**
Neutral English code labels cover existing supplier stickers. Covered areas have not been reconstructed. Colours and image size do not define physical colour values or the same sample scale.

Source-labelled 8 mm applies only to the corresponding clear and tinted glass references. No unprovided mesh opening, wire diameter, glass performance or certification has been added.

CONTENTS / FOUR MATERIAL GROUPS

# The material selection.

01 Decorative Interlayer Glass 04

96 sample references / IG-050 to IG-145

02 Patterned & Fused Glass 21

50 sample references / FG-023 to FG-072

03 Tinted & Patterned Glass 31

33 sample references / TG-001 to TG-033

04 Decorative Metal Mesh 38

52 sample references / FM-053 to FM-104

Application photographs appear at each glass chapter opening. Mesh imagery comprises supplied framed and pattern samples; no metal-mesh application scene is included in the source.

01 / MATERIAL CHARACTER & APPLICATION

# Decorative Interlayer Glass

Fine weave, open grids and expressive lines held within a glass sample. Select the photographed character, then resolve the glass build-up and frame around it.

Decorative interlayer panel in an interior

Interlayer room divider

DESIGN REFERENCES / Frame and material combinations shown for visual discussion. No exact sample-code or completed-project identity is asserted.

**Character.** The supplied samples include fine and organic weaves, linear grids, abstract networks and metallic-looking colours. Pattern density and light direction change the view through the panel. Colour names describe the photographed appearance.

**Applications.** Consider interior partitions, screens, sliding panels and display features. Review the glass edge, visible faces, pattern direction and its relationship with the metal frame.

**Specification.** Confirm the interlayer composition, glass build-up, panel dimensions, edge processing and mounting. This decorative category does not assign a safety-glass classification or a fire rating.

02 / MATERIAL CHARACTER & APPLICATION

# Patterned & Fused Glass

Single-pane glass with linear, geometric, floral and organic patterns, alongside a separate selection of fused and relief textures.

Hammered glass in a framed interior panel

Patterned glass and architectural framing

DESIGN REFERENCES / Frame and material combinations shown for visual discussion. No exact sample-code or completed-project identity is asserted.

**Character.** Reeded and fluted patterns introduce a clear direction. Floral and geometric patterns provide repeating detail; fused examples have individual relief and surface character. Clear and frosted appearances remain separate selection choices.

**Applications.** Consider framed interior screens, cabinet fronts, partitions and decorative wall or display panels. Texture can soften the view while keeping light part of the composition; assess the actual sample in its intended lighting.

**Specification.** The source labels many single-pane clear samples as 8 mm. This value is retained only for those labelled images. Fused examples have no assigned thickness. Confirm panel size, pattern orientation, visible faces and processing; no tempered or laminated construction is implied.

03 / MATERIAL CHARACTER & APPLICATION

# Tinted & Patterned Glass

Grey, grey-brown, golden-brown and blue references, with plain, linear, geometric and frosted appearances.

Tinted glass and metal framing

Tinted glass partition reference

DESIGN REFERENCES / Frame and material combinations shown for visual discussion. No exact sample-code or completed-project identity is asserted.

**Character.** The source chapter uses a broad dark-glass heading, but the pictured and labelled range contains several tints. Tint and surface pattern are recorded separately; a dark photograph alone is not a material specification.

**Applications.** Consider metal-framed interior dividers, cabinet doors and display fronts where a tinted appearance is part of the design. Discuss which faces are visible, the background behind the glass and the frame colour.

**Specification.** The labelled references in this group state 8 mm. Confirm tint, finish on each face, processing, panel dimensions and edge details. No optical transmission value, opacity level or safety classification is assigned from a photograph.

04 / MATERIAL CHARACTER & APPLICATION

# Decorative Metal Mesh

Open grids, woven surfaces and framed samples for custom architectural metalwork. Compare the pattern, its density and the way it sits within the assembly.

Open Decorative Grid - Framed Sample

Rounded Link Grid

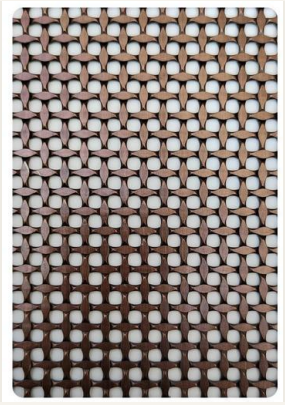

**Character.** The supplied catalogue shows wire-like, multi-strand and ribbon-like patterns, ranging from open grids to dense weaves. Natural, warm metallic and dark appearances are visual references, not confirmed coating recipes.

**Applications.** Discuss screens, partitions, decorative wall features, suspended panels and display infill. Facade or other exterior use requires a review of the selected metal, finish, fixing and project environment.

**Specification.** The source describes stainless steel, aluminium alloy and copper, plus plating, anodising and painted colour treatments. Confirm which material and treatment apply to the chosen sample. Wire or strip size, opening, panel dimensions and mounting are project-specific; no fire rating is asserted.

FABRITERA / PROJECT ENQUIRY

# Discuss the material and the metalwork.

FABRITERA manufactures custom stainless-steel and architectural metalwork based on client drawings, CAD files, renderings or reference images, and develops the fabrication details required to turn design intent into manufacturable products.

**Include with your enquiry**
Material reference codes; intended product and location; drawings or reference images; approximate dimensions and quantities; visible finish, tint and pattern direction; glass construction or metal requirements; mounting and site interfaces.

**From a material reference to the assembly**
A glass or mesh appearance helps describe an infill or decorative element. Select it alongside the metal finish, then resolve the frame, interfaces, handling and project specification together.

**Inspection and delivery**
Complete finished products receive final quality checks. Products that require segmented delivery are fully preassembled and inspected, then dismantled, numbered, protected and packaged. Overseas installation is normally undertaken by the customer's local team.
